

# Synthesis characterization and antimicrobial activity of 6-nitro-1H-benzo[d]imidazole-2-yl) methyl)-6-oxido-4,8-dihydro-1H-[1, 3, 2] dioxaphosphepino [5,6-c] pyrazole-6-yl) ureas/carboxamides-Mannich bases 

C. H. Lakshmi Praveena, V. Esther Rani, Y. N. Spoorthy and L. K. Ravindranath*<br>Department of Chemistry, S. K. University, Anantapur

#### Abstract

New mannich bases of 1(-(1-((1-(morpholinomethyl/piperidin-1-ylmethyl/(4-methyl piperazine-1-yl)methyl))-6-nitro-1H-benzo[d]imidazole-2-yl)methyl)-6-oxido-4,8-dihydro-1H-[1,3,2] dioxaphosphepino [5,6-c] pyrazole-6-yl)-3-(phenyl/p-tolyl/4-methoxy phenyl/4-chloro phenyl) ureas $\mathbf{9 ( a - j )}$ were prepared by condensation reaction between1-((1-(piperidin-1-ylmethyl))/(1-morpholino methyl)/(4-methyl piperazin-1-ylmethyl)-6-nitro-1H-benzo [d] imidazol-2-yl) methyl)-1H-pyrazole-4, 5-diyl) dimethanol 7(a-c) and (phenyl carbamoyl) phosphoric acid dichlorides $8(a-g)$.The synthon $7(a-c)$ was obtained by deprotection of isopropilidine group of 6,6-dimethyl-1-((6-nitro-1-((1-(piperidin-1-ylmethyl)/ (1-morpholinomethyl)) (4-methyl piperazin-1-ylmethyl)-1H-benzo[d]imidazol-2-yl)methyl)-4,8-dihydro-1H-[1,3]-dioxepIno [5,6-c] pyrazole $\mathbf{6}(\boldsymbol{a}-\boldsymbol{c})$.The synthon $\mathbf{6}(\boldsymbol{a}-\boldsymbol{c})$ was obtained by mannich reaction of 6, 6-dimethyl-1-((6-nitro-1H-benzo[d]imidazol-2-yl) methyl-4, 8-dihydro-1H-[1, 3] - dioxepino [5, 6-c] pyrazole (5) with different secondary amines having hetero atom in cyclic ring and HCHO in presence of DMF.The synthon 5 obtained by condensation reaction between 2-(6, 6-dimethyl-4, 8-dihydro-1H-[1, 3] dioxepino [5, 6-c] pyrazole-1-yl) acetic acid 3 and 4-nitro benzene 1,2-amine. Similar procedure was adapted to prepare N-(1-((1-morpholinomethyl)-1H-benzo[d]imidazol-2-yl)methyl)-6-oxido-4,8-dihydro-1H-[1,3,2]dioxaphosphepino[5,6-clpyrazol-6-yl)morpholine piperadine/4-methylpiperazine carboxamides ( $\mathbf{9 k}$-m).

Key words: (phenyl carbamoyl) phosphoric acid dichlorides, Pyrazole, Cyclizaton, Deprotection, Antibacterial and Antifungal activity.

## INTRODUCTION

Pyrazole derivatives possess a broad spectrum of pharmalogical activities such as anticonvulsant $\mathrm{p}[1]$, antiparkinson [2] , monoamine oxidase ( MAO ) inhibitory activity [3], anti-bacterial, anti-fungal activity [4], it also function as dyestuff, catalyst, polymerizing agents, drugs, herbicides and fungicides [5]. Pyrazole derivatives are valuable vasodialating and vasoconstructing drugs.

Benzimidazoles, benzoxazole and benzthiazoles nuclei are constituent of many of the bioactive heterocyclic compounds that exhibit antianginal, antiischaemic, vasodilator, anti-diabetic, anti-microbial, cardiovascular, tranquilizer and virucidal activities [6-14].

The chemistry of phosphorus heterocyclic compounds containing nitrogen has pioneered the application of combinatorial techniques to the development of new pharmaceutical materials with novel properties [15, 16].

Organophosphorus compounds possess significant biological activity against broad spectrum of bacteria, pets, virus, fungicides and plant growth regulators. The organophosphorus heterocyclic compounds chemistry received much attention of chemists in past two decades due to their wide range of applications in the field of the Agriculture, medicine and industry $[17,18]$. Some organophosphorus compounds have been described in the literature as inhibitors of bacterial [19], herbicides, insecticides, pesticides [20,21], anti-fungal agents [22], anti-HIV [23] , anticancer [24], anti-viral and anti-inflammatory [25] .

A good deal of importance was given to 1, 3, 2-Dioxaphosphorinane and dioxaphospholane derivatives in the field of organophosphorus heterocyclic chemistry due to their unique stereochemical futures and diverse potential biological applications [26, 27]. In view of the numerous commercial applications of organophosphorus compounds. It appeared of interest to synthesize pyrazole derivatives possessing Benzazole moiety besides 1, 3, 2Dioxaphosphorinane and dioxaphospholanes.

## EXPRIMENTAL SECTION

All the chemicals used in the present investigation were purchased from Sigma-Aldrich Chemical Company, inc.USA. and used without further purification. TLC was performed on aluminum sheet of silica gel $60 \mathrm{~F}_{254}$, EMerk, Germany using iodine as visualizing agent .Melting points were determined in open capillary tubes on MelTemp apparatus and are uncorrected. Colum chromatography was performed on silica gel with different solvent systems as eluents to afford the pure compound. The IR spectra were recorded as KBr pellets on Perkin-Elmer 1000 unit, Instrument. All $\mathrm{H}^{1}$ and $\mathrm{C}^{13}-$ NMR . $\mathrm{P}^{31}$-NMR spectra were recorded on a Varian XL-300MHz for $\mathrm{H}^{1}-\mathrm{NMR}$ and 75.46MHZ for $\mathrm{C}^{13}$-NMR. $\mathrm{P}^{31}$-NMR spectra were recorded ona Varian XL-spectrometer operating at 161.89 MHz . The compounds were dissolved in DMSO-d6 and Chemical shifts were referenced to TMS ( $\mathrm{H}^{1}$ and $\mathrm{C}^{13}-$ NMR) and $85 \% \mathrm{H}_{3} \mathrm{PO}_{4}(\mathrm{p} 31-\mathrm{NMR})$. Mass spectral data was recorded on FAB-MS instrument at 70 ev with direct inlet system. Elemental analyses were recorded on Carlo Erba 1108 Elemental Analyses, Central Drug Research Institute, Lucknow, India.

## Prepration of Intermediates:

(Phenyl carbamoyl) phosphoric acid dichloride ( $8 a-g$ )[28, 29]:
A solution of aniline $(0.51 \mathrm{~g}, 0.004 \mathrm{~mole})$ in dry toluene $(25 \mathrm{ml})$ was added drop wise to phosphide oxide $(6,0.64 \mathrm{~g}$, 0.004 mole) in dry toluene $(30 \mathrm{ml})$. After the addition, the temperature of the reaction mixture was maintained between -15 to $-5^{0} \mathrm{c}$ for 30 minutes. Later the temperature of the mixture was raised to room temperature, with stirring for 30 minutes .Phenyl carbomido phosphoric acid dichloride being insoluble in toluene was separated out .It was collected by filtration and dried under reduced pressure.

Similar treatment of 4-substituted Anilines / morpholine/piperidine/ N-methyl piperazine with dichloro isocyanato phosphine oxide in presence of dry toluene at -15 to $-5^{\circ} \mathrm{c}$ for 30 minutes offered the respective derivatives of 4substituted Phenyl /marphonylyl /piperidinyl/ N-methyl piperazenyl carbamido phosphoric acid dichloride.

## RESULTS AND DISCUSSION

## Typical Procedure for Synthesis of 2-(6, 6-dimethyl-4, and 8-dihydro-1H-[1, 3] dioxepino [5, 6-c] pyrazole-1-

 yl) acetic acid 3:A suspension of 1-H-pyrazole-4, 5-dimethanol (1Mmole) (1) was dissolved in acetone ( 5 ml ) and 2, 2-dimethoxy propane (DMP, 2Mmole) solvent mixture. To the reaction mixture phosphotungstic acid (PTA, 5mole \%) was added. The reaction mixture was stirred at room temperature for 4 hours under argon atmosphere until the 1-H-pyrazole-4; 5-dimethanol (1) had dissolved. The progress of the reaction was monitored by TLC using cyclohexane and ethyl acetate ( $9: 1$ ) solvent mixture as an eluent. After completion of the reaction, it was observed that the catalyst forms a gummy mass to stick on the wall inside the reaction flask. The solvent was decanted, dried under reduced pressure and the dried mass was re dissolved in dichloromethane (DCM). The dichloromethane solution was washed with water, dried with $\mathrm{Na}_{2} \mathrm{SO}_{4}$ and evaporated to get the crude product (2), which was recrystallized by dissolving in boiling ether $(5 \mathrm{ml} / \mathrm{g})$, cooling and then adding hexane $(5 \mathrm{ml} / \mathrm{g})$ to give the pure product (2) [30]

A mixture of 6, 6-dimethyl-4, 8-dihydro- 1 H - $\left[1,3\right.$ ] dioxepino [5, 6-c] pyrazole (2), anhydrous $\mathrm{K}_{2} \mathrm{CO}_{3}$ chloro acetic acid and dimethyl formamide (DMF) was stirred at room temperature for 8 hours. The progress of the reaction was monitored by TLC using cyclohexane and ethyl acetate (7:3) solvent mixture as an eluent. The reaction mixture was
diluted with ice cold water. The separated solid was identified as (3). This was collected by filtration and recrystallized from ethanol.

Scheme:1:synthetic route of 1(-(1-((1-(morpholinomethyl/piperidin-1-ylmethyl/(4-methyl piperazine-1-yl) methyl))-6-nitro-1H-benzo[d]imidazole-2-yl)methyl)-6-oxido-4,8-dihydro-1H-[1,3,2]dioxaphosphepino[5,6-c]pyrazole-6-yl)-3-(phenyl/p-tolyl/4-methoxy phenyl / 4-chloro phenyl) ureas (9a-j)

Typical Procedure for Synthesis of 6, 6-dimethyl-1-((6-nitro-1H-benzo[d]imidazol-2-yl) methyl-4, 8-dihydro$1 \mathrm{H}-[1,3]$-dioxepino [5, 6-c] pyrazole (5) [31, 32] :
A mixture of 0.1 mole 2-(6, 6-dimethyl-4, 8-dihydro-1H-[1, 3] dioxepino [5, 6-c] pyrazole-1-yl) acetic acid (3) and 0.1 mole 4 -nitrobenzene1, 2-diamine (4) was heated under reflux for 1.5 hours with stirring at $130^{\circ} \mathrm{C}$. The progress of the reaction was monitored by TLC using cyclohexane and ethyl acetate ( $7: 3$ ) solvent mixture as an eluent. At the end of the reaction period, the mixture was taken in a 30 ml dichloromethane and neutralized with 50 ml 1 N NaOH solution, after neutralization the mixture was extracted with $\mathrm{CH}_{2} \mathrm{Cl}_{2}(3 \times 25 \mathrm{ml})$. The combined extract was dried on $\mathrm{Na}_{2} \mathrm{SO}_{4}$. After filtration, the solvent was removed with rotary evaporator. The residue was purified by column chromatography, using 60 mesh silica and $\mathrm{CHCl}_{3}$ solvent was used as an eluent. Finally the product 6, 6-dimethyl-1-((6-nitro-1H-benzo [d] imidazol-2-yl) methyl-4, 8-dihydro-1H-[1, 3]-dioxepino [5, 6-c] pyrazole (5) was purified from aqueous dimethyl formamide.

Physical, analytical and spectral data for 6, 6-dimethyl-1-((6-nitro-1H-benzo[d]imidazol-2-yl) methyl-4, 8-dihydro-1H-[1, 3]-dioxepino [5, 6-c] pyrazole (5) :

Typical Procedure for Synthesis of 1(-(1-((1-(morpholinomethyl/piperidin-1-ylmethyl/(4-methyl piperazine-1-yl)methyl))-6-nitro-1H-benzo[d]imidazole-2-yl)methyl)-6-oxido-4,8-dihydro-1H-[1,3,2] dioxaphosphepino[5,6c] pyrazole-6-yl)-3-(phenyl/p-tolyl/4-methoxy phenyl / 4-chloro phenyl) ureas (9a-j):
A solution of (phenylcarbamoyl)phosphoramidic dichloride (8a) ( 0.002 mole ) in 25 ml of dry toluene was added drop wise over a period of 20 minutes to a stirred solution of 1-((1-morpholinomethyl)-6-nitro-1H-benzo[d]imidazol-2-yl)methyl)-1H-pyrazole-4,5-diyl)dimethanol (7a) ( 0.002 mole ) and triethylamine ( 0.004 mole ) in 30 ml of dry toluene and 10 ml of tetrahydrofuran at $5^{\circ} \mathrm{c}$. After completion of the addition, the temperature of the reaction mixture was slowly raised to room temperature and stirred for 2 hours. Later the reaction mixture was heated to $50-60^{\circ} \mathrm{C}$ and maintained for 4 hours with stirring. The completion of the reaction was monitored by TLC analysis. Triethyl amine hydrochloric acid was filtered from mixture and solvent was removed under reduced pressure. The residue was washed with water and then recrystallized from aqueous 2-propanol to get pure compound of 1-1-((1-(morpholino methyl)-6-nitro-1H-bezo[d] imidazole-2-yl)-6-oxido-4,8-dihydro-1H-[1,3,2]dioxaphosphepino[5,6-c]pyrazol-6-yl)-3-phenylurea (9a).The similar procedure was adopted to synthesise $9 \mathrm{~b}-\mathrm{d}$ by the reaction between 7 a with p-tolyl carbamoyl phosphoramidic dichloride ( $8 \boldsymbol{b}$ ), 4-methoxy phenyl carbamoyl phosphoramidic dichloride ( 8 c ), and 4-chloro phenyl carbamoyl phosphoramidic dichloride ( 8 d ).

The reaction between 7 b with phenylcarbamoyl) phosphoramidic dichloride ( 8 a ), p-tolyl carbamoyl phosphoramidic dichloride ( $8 \boldsymbol{b}$ ) and 4-chloro phenyl carbamoyl phosphoramidic dichloride ( $8 \boldsymbol{d}$ ) afforded $\mathbf{9 e - g}$. The similar procedure was adapted to synthesis $9 h-j$ from $7 c$ and $8 a / 8 b / 8 d$ respectively.. The compounds thus obtained were charecterised by their elemental analysis and spectral data (IR, $\mathrm{H}^{1}-\mathrm{NMR}, \mathrm{P}^{31}-\mathrm{NMR}, \mathrm{C}^{13}-\mathrm{NMR}$ and Mass).

Physical, analytical and spectral data for the compounds $9(a-j)$ :

Typical Procedure for Synthesis of N-(1-((1-morpholinomethyl)-1H-benzo[d]imidazol-2-yl )methyl)-6-oxido- , 8-dihydro-1H-[1,3,2]dioxaphosphepino[5,6-c]pyrazol-6-yl)morpholine/piperadine/4-methylpiperazine carboxamides $(9 k-m)$ :
A solution of Morpholino carbamoyl phosphoramidic dichloride(8e) ( 0.002 mole ) in 25 ml of dry toluene was added drop wise over a period of 20 minutes to a stirred solution of 1-((1-morpholino methyl)-6-nitro -1H-benzo[d]imidazol-2-yl)methyl)-1 H-pyrazole-4,5-diyl) dimethanol7(a)(0.002mole)andtriethylamine( 0.004 mole) in 30 ml of dry toluene and 10 ml of tetrahydrofuran at $5^{0} \mathrm{c}$. After completion of the addition, the temperature of the reaction mixture was slowly raised to room temperature and stirred for 2 hours. Later the reaction mixture was heated to $50-60^{\circ} \mathrm{C}$ and maintained for 4 hours with stirring. The completion of the reaction was monitored by TLC analysis. Trimethyl amine hydrochloric acid was filtered from mixture and solvent was removed under reduced pressure. The residue was washed with water and then recrystallized from aqueous 2-propanol to get pure compound of N -(1-((1-(morpholino methyl)-6-nitro-1H-bezo[d]imidazol-2-yl)methyl)-6-oxido-4,8-dihydro-1H-[1,3,2]dioxaphosphepino[5,6-c]pyrazol-6-ylmorpholine-4-carboxamide (9k).

The similar procedure was adopted to synthesize 91 and 9 m by the reaction between $7 \boldsymbol{b}$ and $7 \boldsymbol{c}$ with (piperidine-1carbonyl) phosphoramidic dichloride $8(f)$ and 4-methyl piperazine-1-carbamoyl phosphoramidic dichloride $8(\boldsymbol{g})$ respectively. The structures of $91-\mathrm{m}$ were established by IR, ${ }^{1} \mathrm{H}-\mathrm{NMR},{ }^{13} \mathrm{C}-\mathrm{NMR}$, mass data and elemental analysis. The compounds thus obtained were charecterised by their elemental analysis and spectral data (IR, $\mathrm{H}^{1}-\mathrm{NMR}, \mathrm{P}^{31}$ NMR, $C^{13}-$ NMR and Mass).

Physical, analytical and spectral data for the compounds 9(k-m):

## Biological activity:

The antimicrobial activity [33] of chemical compound is influenced by physical and biological characteristics [34].It has been well established that physiological activity is a function of the chemical structure of compound [35].Heterocyclic organic compounds containing phosphorus, oxygen, nitrogen or sulfur in the ring system are expected to be more active due to the presence of hetero atoms [36,37,38].

In view of this, the synthesized new organophosphorus heterocyclic compounds have been tested for their antimicrobial activity.

## Antibacterial activity:

The antibacterial activity [39] of 1(-(1-((1-(morpholinomethyl/piperidin-1-ylmethyl/(4-methyl piperazine-1-yl) methyl))-6-nitro-1H-benzo[d] imidazole-2-yl)methyl)-6-oxido-4,8-dihydro-1H-[1,3,2]dioxaphos phepino[5,6-c]
pyrazole-6-yl)-3-(phenyl/p-tolyl/4-methoxyphenyl/4-chloro phenyl )ureas(9a-j) and N-(1-((1-morpholinomethyl)-1H-benzo[d] imidazol-2yl)methyl)-6-oxido-4,8-dihydro-1H-[1,3,2]dioxaphos phepino[5,6-c]pyrazol-6-yl) morpholine/piperadine/4-methyl piperazine carboxamides $(9 k-m)$ were screened against the Staphylococcus aureus (gram positive), BacillusCerus, Escherichia coli (gram negative) and Pseudomonas aeruginosa organism . Most of the compounds exhibited moderate antibacterial activity against bacteria. The presence of chloro group in the structure has shown increased effect on their antibacterial activity. Amoxicillin and Cefaclor are tested as reference compounds to compare the activity.

Antibacterial activity of 1(-(1-((1-(morpholinomethyl/piperidin-1-ylmethyl/(4-methyl piperazine-1-yl)methyl))-6-nitro-1H-
benzo[d]imidazole-2-yl)methyl)-6-oxido-4,8-dihydro-1H-[1,3,2] dioxaphosphepino [5,6-c]pyrazole-6-yl)-3-(phenyl/p-tolyl/4-methoxy phenyl / 4-chloro phenyl) ureas ( $9 a-j$ ) and N -(1-((1-(morpholinomethyl)-1H-benzo [d] imidazol-2yl) methyl)-6-oxido-4, 8-dihydro -1H- [1, 3, 2] dioxaphosphepino [5,6-c] pyrazol-6-yl)morpholine/ piperidine /4-methyl piperazine carboxamides( $9 k-m$ )
