#### Abstract

Novel pyridine derivatives were synthesized by reaction of chalcones 4(a-e) with different acetyls 5(a, b) under microwave irradiations or under reflux conditions. In general, microwave irradiation offered the advantages of high yields, short reaction times, and simplicity compared to the conventional methods. The structures of all the compounds were confirmed by analytical and spectral data. Some of The synthesized compounds were evaluated against HepG-2, and showed significant antitumor activities.

Keywords: Green chemistry; microwave; solventless; grinding; pyridine

## INTRODUCTION

Microwave provides a powerful way in synthesis in light of the green chemistry protocol; in other words, it furnishes many chemical reaction improvements, such as enhanced reaction rates, higher yields of pure products as well as eco-friendly advantages [1]. Thus, procedures employing microwave methodology involving an appropriate green-approach must be welcome.
Chalcones, one of the major classes of natural products with widespread occurrence in fruits, vegetables, spices and soy based foodstuff, have been reported to possess several biological activities such as anti-inflammatory [2], antibacterial [3,4], anti-fungal [5-7], and anti-tumor activities [8-11]. An important feature of chalcones is their ability to act as an intermediate for the synthesis of biologically active heterocyclic compounds such as, pyridine, derivatives [12,13].
Pyridine is the parent ring system of a large number of naturally occurring products and important industrial, pharmaceutical, and agricultural chemicals. Pyridine derivatives exhibit various biological activities such as anticancer [14-16], antibacterial [17,18], antimycobacterial [19,20], antiviral [21-24], antitubercular [25], anticonvulsant [26], anti-inflammatory [27], insecticidal [28], antioxidant [29], antidiabetic [30], and analgesic [31] activities.

## EXPERIMENTAL SECTION

## Instruments

All melting points were measured on a Gallenkamp melting point apparatus and are uncorrected. The infrared spectra were recorded in potassium bromide disks on a pye Unicam SP 3300 and Shimadzu FT-IR 8101 PC infrared spectrophotometers. The NMR spectra were recorded on a Varian Mercury VXR-300 NMR spectrometer. ${ }^{1} \mathrm{H}$
spectra were run at 300 MHz and ${ }^{13} \mathrm{C}$ spectra were run at 75.46 MHz in dimethyl sulphoxide (DMSO-d6). Chemical shifts were related to that of the solvent. Mass spectra were recorded on a Shimadzu GCMS-QP 1000EX mass spectrometer at 70 e. V. Elemental analyses were carried out at the Microanalytical Center of Cairo University, Giza, Egypt.
Reactions carried out under microwave irradiation were performed in a domestic microwave oven using 50 or $100 \%$ power.

## Materials, solvents and reagents

All organic solvents were purchased from commercial sources and used as received or dried using standard procedures unless otherwise stated. All chemicals were purchased from Merck, Aldrich or Across and used without further purification, thin layer chromatography (TLC) was performed on precoated Merck 60GF254 silica gel plates with fluorescent indicator, and detection by means of UV light at 254 and 360 nm .

## Organic synthesis and reactions

## 1-(4-((1-(4-aminophenyl)ethylidene)amino)phenyl)ethanone (2)

Conventional method: p-aminoacetophenone (1) (100 mmol) was refluxed in 50 ml acetic acid for 6 hours to give buff precipitate which was filtered and recrystalized from acetone to afford 1-(4-((1-(4aminophenyl)ethylidene)amino)phenyl)ethanone (2) in $88 \%$ Yield [32].

Green method: p-aminoacetophenone (1) ( 100 mmol ) and one drop of acetic acid was ground in mortar for 1 hour till color change to give buff precipitate which was recrystallized from acetone to afford product identical in all respects ( mp , mixed mp and TLC) with 1-(4-((1-(4-aminophenyl)ethylidene)amino)phenyl)ethanone (2) in 95\% Yield.
M.p. $=158-160{ }^{\circ} \mathrm{C}$; IR $\left(\mathrm{KBr}, \mathrm{cm}^{-1}\right): 1179(\mathrm{C}-\mathrm{N}), 1537(\mathrm{C}=\mathrm{C}), 1590(\mathrm{C}=\mathrm{N}), 1674(\mathrm{C}=\mathrm{O}), 3263,3296\left(\mathrm{NH}_{2}\right) ;{ }^{1} \mathrm{H}$

NMR (DMSO-d ${ }_{6}$ ) $\delta=2.09\left(\mathrm{~s}, 3 \mathrm{H}, \mathrm{CH}_{3}-\mathrm{C}=\mathrm{N}-\right.$ ), $2.84\left(\mathrm{~s}, 3 \mathrm{H}, \mathrm{CH}_{3} \mathrm{C}=\mathrm{O}\right.$ ), 6.55-7.93 (m, 8H, Ar-H), 10.28 ( $\mathrm{s}, 2 \mathrm{H}, \mathrm{NH}_{2}$ $\mathrm{D}_{2} \mathrm{O}$ exchangeable); ${ }^{13} \mathrm{C}$ NMR (DMSO- $\left.\mathrm{d}_{6}\right): \delta 24.65\left(\mathrm{CH}_{3} \mathrm{C}=\mathrm{N}\right), 26.87\left(\mathrm{CH}_{3} \mathrm{C}=\mathrm{O}\right), 112.91,118.58,125.29$, 129.94, 131.03, 131.94, 144.11, 154.08, 196.93 (aromatic), $165.40\left(\mathrm{CH}_{3} \underline{\mathrm{C}}=\mathrm{N}\right)$; MS ( $\mathrm{m} / \mathrm{z}$ ): $252\left(\mathrm{M}^{+}\right)$; Anal. For $\mathrm{C}_{16} \mathrm{H}_{16} \mathrm{~N}_{2} \mathrm{O}$ (252.13). (Calcd: C, 76.16 ; H, 6.39; N, 11.10\%; Found: C, $76.14 ;$ H, 6.38 ; N, 11.13\%)

## Reaction of 1-(4-((1-(4-aminophenyl)ethylidene)amino)phenyl)ethanone (2) with different aldehydes (3a-e)

Conventional method: A mixture of 1-(4-((1-(4-aminophenyl)ethylidene)amino)phenyl)ethanone (2) (50 mmol) and appropriate aldehydes ( $3 \mathrm{a}-\mathrm{e}$ ) ( 50 mmol ) was stirred at room temperature in 20 ml ethanol in presence of 0.01 g potassium hydroxide for appropriate time to afford the corresponding derivatives (4a-e) in $80-85 \%$ yield.

Green method: A mixture of 1-(4-((1-(4-aminophenyl)ethylidene)amino)phenyl)ethanone (2) (50 mmol) and appropriate aldehydes ( $3 \mathrm{a}-\mathrm{e}$ ) ( 50 mmol ) in presence of 0.01 g potassium hydroxide was ground in mortar for appropriate time till color change to afford product identical in all respects ( mp , mixed mp and TLC) with ( 4 a-e) in 93-96\% yield.

## RESULTS AND DISCUSSION

p-aminoacetophenone (1) was ground in presence of one drop of acetic acid to afford 1-(4-((1-(4aminophenyl)ethylidene)amino)phenyl)ethanone (2) in $95 \%$ Yield, whereas conventional method occurs for 6 hours with $88 \%$ yield (Scheme 1) [32].

Scheme 1
A mixture of 1-(4-((1-(4-aminophenyl)ethylidene)amino)phenyl) ethanone (2) and appropriate aldehyde $\mathbf{3}(\mathbf{a}-\mathbf{e})$ was stirred at room temperature in 20 ml ethanol in presence of 0.01 g potassium hydroxide for 3-4 hours to afford the corresponding chalcone 4 (a-e) in $80-85 \%$ yields, whereas grinding method occurs for $0.5-1$ hour with (93-96\%) yield (Scheme 2).

Scheme 2
The structure of compounds 4(a-e) were confirmed by its elemental analysis and spectral data. For example, its IR spectrum showed $\mathrm{C}-\mathrm{N}$ bands at $1177-1179 \mathrm{~cm}^{-1}, \mathrm{C}=\mathrm{C}$ bands at $1529-1534 \mathrm{~cm}^{-1}, \mathrm{C}=\mathrm{N}$ bands at $1588-1590 \mathrm{~cm}^{-1}, \mathrm{C}=\mathrm{O}$ bands at 1673-1676 $\mathrm{cm}^{-1}$ and two symmetric and asymmetric bands at $3185-3268,3297-3299 \mathrm{~cm}^{-1}$ due to amino group, while compound (4b) appeared C-S band at $1313 \mathrm{~cm}^{-1}$, while compound (4c) appeared C-O band at $1260 \mathrm{~cm}^{-}$ ${ }^{1}$ and compound (4e) appeared NH band at $3113 \mathrm{~cm}^{-1}$, its ${ }^{1} \mathrm{H}$ NMR spectrum displayed a singlet signal at $\delta 2.09 \mathrm{ppm}$ due to methyl protons ( $\mathrm{s}, 3 \mathrm{H}, \mathrm{CH}_{3}-\mathrm{C}=\mathrm{N}-$ ), and a duplet signal at $\delta 6.55-7.48 \mathrm{ppm}$ due to proton $(\mathrm{d}, 1 \mathrm{H}, \mathrm{CH}=\mathrm{CH}$ ), in addition to an aromatic multiplets in the region $\delta 6.71-8.66 \mathrm{ppm}$, The $\mathrm{NH}_{2}$ protons appeared as a $\mathrm{D}_{2} \mathrm{O}$ exchangeable singlet at $\delta 10.28-10.31 \mathrm{ppm}$, while compound (4e) showed a singlet signal at $\delta 9.94 \mathrm{ppm}$ due to NH proton (s, 1 H , $\mathrm{NH})$, its ${ }^{13} \mathrm{C}$ NMR spectrum showed a $\delta$ 24.26-24.79 ( $\left.\mathrm{CH}_{3} \mathrm{C}=\mathrm{N}\right)$, 119.10-129.17 ( $\mathrm{CH}=\mathrm{CH}$ ), 129.94-144.12 $(\mathrm{CH}=\underline{\mathrm{C}})$, 169.35-169.46 $\left(\mathrm{CH}_{3} \underline{\mathrm{C}}=\mathrm{N}\right)$, 185.43-196.93 $(\underline{\mathrm{C}}=\mathrm{O})$.
A mixture of chalcones $4(\mathrm{a}-\mathrm{e})(1 \mathrm{mmol})$, and 2-acetyl thiophene or 3-aceyl pyridine $5(\mathrm{a}, \mathrm{b})(1 \mathrm{mmol})$ in the presence of sodium hydroxide $(0.1 \mathrm{mmol})$ was ground in mortar for 20 minutes till color change to obtain diketone then add ammonium acetate ( 1 mmol ) and the mixture was refluxed in acetic acid glacial for 6 hours until completion of the reaction (monitored by TLC) to give precipitates which were filtered and recrystalized from ethanol/DMF (1:1) to
afford the corresponding derivatives $6(\mathrm{a}-\mathrm{j})$ in $55-71 \%$ yield, whereas microwave method occurs for 1-2 minutes with $90-96 \%$ yield.

## Scheme 3

The structure of compounds 6(a-j) were confirmed by its elemental analysis and spectral data. For example, its IR spectrum showed C-N bands at $1176-1179 \mathrm{~cm}^{-1}$, while C-O bands at 1265 and $1263 \mathrm{~cm}^{-1}$ for compounds ( 6 e ) and (6f), while C-S bands at 1315, 1315, 1315, 1317, 1315and $1316 \mathrm{~cm}^{-1}$ for compounds (6a), (6c), (6d), (6e), ( 6 g ) and (6i) respectively, $\mathrm{C}=\mathrm{C}$ bands at $1531-1539 \mathrm{~cm}^{-1}, \mathrm{C}=\mathrm{N}$ bands at $1589-1594 \mathrm{~cm}^{-1}$, while NH bands at 3057 and 354 $\mathrm{cm}^{-1}$ for compounds (6i) and (6j), and two symmetric and asymmetric bands at $3180-3187,3286-3297 \mathrm{~cm}^{-1}$ due to amino group, its ${ }^{1} \mathrm{H}$ NMR spectrum displayed a singlet signal at $\delta 2.09 \mathrm{ppm}$ due to methyl protons ( $\mathrm{s}, 3 \mathrm{H}, \mathrm{CH}_{3}-\mathrm{C}=\mathrm{N}-$ ), and disappeared a signal due to proton ( $\mathrm{CH}=\mathrm{CH}$ ), in addition to an aromatic multiplets in the region $\delta$ 6.55-9.53 ppm , while -NH - proton ( $\mathrm{s}, 1 \mathrm{H}, \mathrm{NH}$ ) showed singlet signals at $\delta 10.30$ and 10.31 ppm for compounds ( 6 i ) and ( 6 j ), The $\mathrm{NH}_{2}$ protons appeared as a $\mathrm{D}_{2} \mathrm{O}$ exchangeable singlet at $\delta 10.26-10.62 \mathrm{ppm}$, its ${ }^{13} \mathrm{C}$ NMR spectrum showed a $\delta$ $24.52\left(\underline{C H}_{3} \mathrm{C}=\mathrm{N}\right), 100.24-156.61$ (aromatics), $169.34\left(\mathrm{CH}_{3} \underline{\mathrm{C}}=\mathrm{N}\right)$ and disappeared $(\underline{\mathrm{C}}=\mathrm{O})$ band.

Table 1: Shows the products of the reaction of compound 2 with aldehydes $3(a-e)$ under the effect of grinding method and stirring condition

| Product | Aldehyde | Stirring |  | Grinding |  |

## CONCLUSION

The present study leads to a convenient synthetic method for the synthesis of new compounds in green chemistry such as microwave and grinding methods which increased reaction rates, yields of pure products as well as ecofriendly advantages, and shows significant on HepG2 cells further investigation with appropriate structural modification of the above compounds may result in therapeutically useful products.
